

CRUD Project

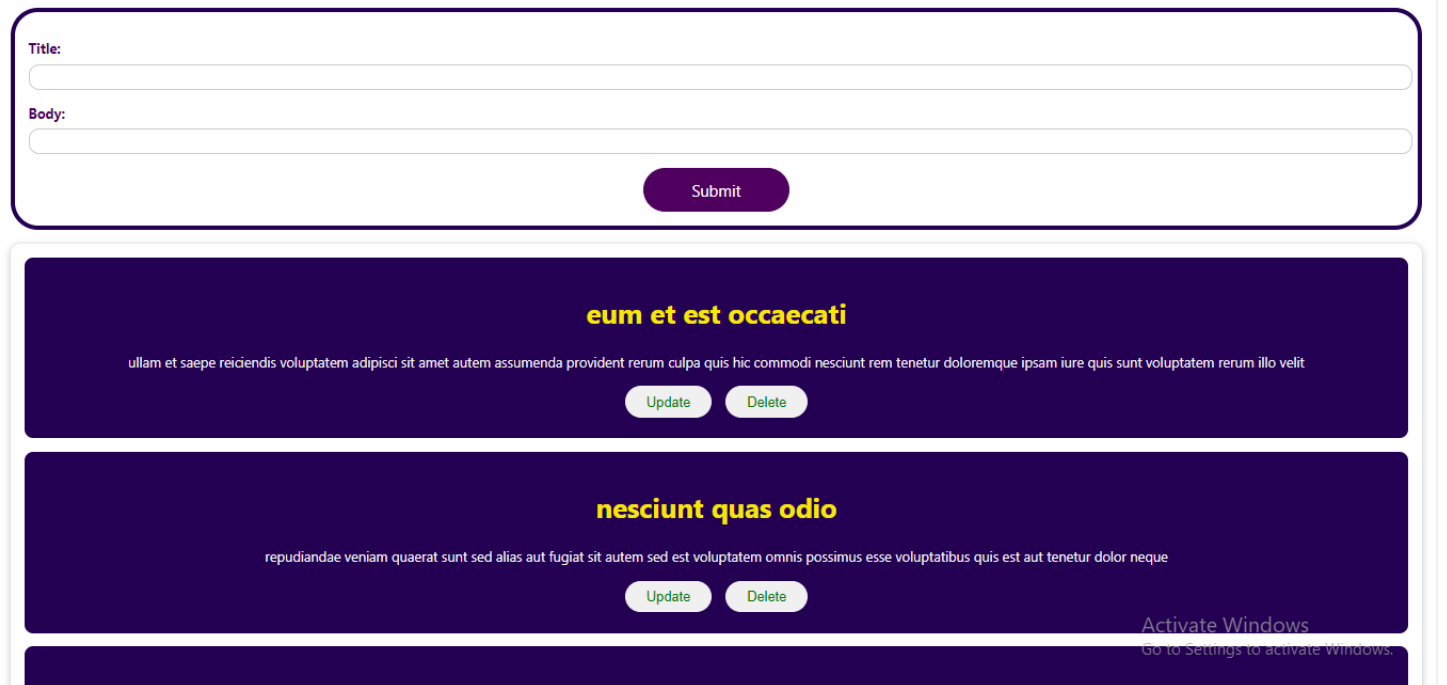

Project Name: **CRUD project**

Description: Fetching data from api, save data in localStorage and perform CRUD operation

api: <https://jsonplaceholder.typicode.com/posts>

⇒ Fetching & saving the data in local storage.

⇒ Showing the data in user interface.

The image shows a dark-themed web interface. At the top, there is a form with two input fields labeled "Title:" and "Body:". Below this form is a modal dialog box with a white background and a dark border. The modal contains two input fields, also labeled "Title:" and "Body:", and two buttons at the bottom: "Submit" and "Cancel". Below the modal, there is a section with a light gray background containing a paragraph of placeholder text and two buttons: "Update" and "Delete". At the bottom of the page, there is a dark blue footer with the text "nesciunt quas odio" in a light blue font.

⇒ Updating the data by modal, save in localStorage and also change in user interface.

new concepts:

`event.stopPropagation()` is used to stop the propagation of an event from bubbling up the DOM tree. This means that any parent elements of the element that triggered the event will not receive the event.
